in graph based structural pattern recognition the idea is to transform patterns into graphs and perform the analysis and recognition of patterns in the graph domain oco commonly referred to as graph matching a large number of methods for graph matching have been proposed graph edit distance for instance defines the dissimilarity of two graphs by the amount of distortion that is needed to transform

one graph into the other and is considered one of the most flexible methods for error tolerant graph matching this book focuses on graph kernel functions that are highly tolerant towards structural errors the basic idea is to incorporate concepts from graph edit distance into kernel functions thus combining the flexibility of edit distance based graph matching with the power of kernel machines for pattern recognition the authors introduce a collection of novel graph kernels related to edit distance including diffusion kernels convolution kernels and random walk kernels from an experimental evaluation of a semi artificial line drawing data set and four real world data sets consisting of pictures microscopic images fingerprints and molecules the authors demonstrate that some of the kernel functions in conjunction with support vector machines significantly outperform traditional edit distance based nearest neighbor classifiers both in terms of classification accuracy and running time

the general theme of the 10th international joseph a schumpeter society conference held during june 9th 12th 2004 at universita luigi bocconi milan was the exploration of the dynamics of industries driven by the highly interrelated processes of innovation and of structural transformation the phenomena addressed are at the core of schumpeter's work and the discussion of these endogenously created modes of change constitutes one of the major schumpeterian legacies of today indeed the influence of the schumpeterian approach to economic dynamics is far reaching and covers evolutionary as well as neoclassical theories this book provides an account of work in the schumpeterian and evolutionary tradition of industrial dynamics and the evolution of industries here the main analytical concern is that over time industries evolve and change their structure and that in this dynamic process knowledge and technologies the capabilities and incentives of actors new products and processes as well as variants of existing ones and institutions affect and constrain change sometimes smoothly and so times in a radical way thus what is meant here by the term structure and structural change is not the traditional market structure view as reflected for example in the classical discussion of the schumpeterian hypotheses but all those elements and relations between actors knowledge and technologies which drive innovative activities and greatly affect economic performance in an industry
